Dear Infrastructure Planning Department,

I am writing to propose the installation of additional electric vehicle charging stations throughout our community. With the increasing adoption of electric vehicles, it is essential that we provide a supportive infrastructure to encourage sustainable transport.

I kindly request that the Bolsover District Council conduct a feasibility study to determine optimal locations for charging stations in public car parks and along main roads. Implementing this initiative will help reduce our carbon footprint and promote greener travel.

Thank you for considering my proposal. I look forward to a positive response.

Yours faithfully,

A Concerned Citizen
